

# REFRACTION

Refraction is the series of tests performed to determine your eyeglass prescription.

Most medical insurance plans have recently adopted Medicare guidelines & **DO NOT** cover refraction services to determine eyeglass prescriptions.

## **Medical Insurance Only Covers Eye Health**

Medical insurance covers medical problems like glaucoma, diabetes, cataracts, dry eye, macular degeneration, etc. Medical insurance **DOES NOT** cover eyeglasses or refractive services.

## **Vision Plans Only Cover Refractive Care**

Vision Plans cover visits for routine refraction to determine eyeglass prescription. Some vision plans also provide eyeglasses and/or contact lenses.

## **Patient Acknowledgement**

I understand that refraction is a non-covered service under major medical insurance. I agree to pay the cost for refraction in addition to my ordinary major medical co-pay and deductible today. Co-pays & refraction fees are due the day services are rendered.
